

USER-CENTRIC REAL- TIME CHECKER

PROPOSED SOLUTION:

Focus on creating an intuitive system tailored for non-technical users. This solution is centered on a responsive, chatbot-like interface that allows operators to quickly enter compliance criteria and instantly view ranked shipment results.

WORKFLOW:

- User Input Interface: A text field where users can specify or adjust compliance criteria in natural language.
- Data Processing: Real-time ingestion and parsing of shipment data from integrated systems.
- Compliance Engine: Evaluate each shipment based on both predefined rules and user-defined criteria.
- Interactive Ranking: Dynamically rank shipments by compliance score.
- Feedback Integration: Allow users to provide feedback which is used to fine-tune the evaluation process.

TECH STACK:

- Frontend: React with Material UI for a modern, responsive design.
 - Backend: Node.js with Express, integrated with real-time messaging via WebSockets.
 - Database: Firebase or similar real-time database for instant data updates.
 - Cloud: Serverless functions on platforms like AWS Lambda to handle real-time data processing
- 

VIABILITY

By focusing on the user experience, this solution is likely to gain rapid adoption among operators who need quick, actionable insights.

FEASIBILITY:

- Using mature, real-time technologies and frameworks ensures a reliable system that can be quickly implemented and iterated upon, even in resource-constrained environments.

The image features a white background with the text 'THANK YOU' centered. The corners are decorated with abstract, geometric shapes in shades of dark blue and light blue. These shapes are connected by thin, dark brown lines, creating a sense of a string of flags or banners. The shapes are stylized and angular, adding a modern, graphic feel to the design.

THANK YOU
