

STREAMLINE COMPLIANCE DASHBOARD"

PROPOSED SOLUTION:

Develop a comprehensive dashboard that provides a clear, visual overview of shipment compliance. The system aggregates data in real time, visualizes trends, and highlights areas of concern, making it easy for managers to identify and address issues.

BACKGROUND

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur.

WORKFLOW

- Data Aggregation: Consolidate shipment data from various sources and perform initial validations.
- Real-Time Processing: Continuously update compliance scores and issue alerts.
- Visualization: Display data using interactive charts, graphs, and heat maps.
- Drill-Down Analysis: Allow users to click on data points to see detailed reports on compliance issues.
- Report Generation: Provide downloadable compliance reports for audits and review.

TECH STACK:

- Backend: Python (Flask/Django) for API development and data processing.
- Visualization: D3.js or Chart.js for dynamic charts; Grafana for dashboarding.
- Database: PostgreSQL for structured data storage.
- Cloud: AWS or GCP for scalable hosting and data processing.

VIABILITY AND ...

FEASIBILITY:

- Viability: A visual dashboard is a highly effective way to manage compliance issues and make informed decisions.
- Feasibility: With many off-the-shelf visualization libraries and dashboard frameworks available, implementing such a system is both practical and cost-effective. Data integration might pose challenges, but standard APIs and ETL processes can address these efficiently.

Thank you
